DIBELS Data System provides:

- Intuitive, easy-to-use data entry pages and data import tools to enable quick transitions from testing to teaching.
- Unlimited user accounts with four levels of access to ensure student confidentiality and data integrity.

District, school, state, and project reports provide administrators with critical information on student performance for evaluating the effectiveness of a curriculum, the allocation of resources, and professional development needs.

Class and student reports help teachers identify students who need additional instructional support and monitor individual progress and the effectiveness of instruction and intervention programs.
Using data to improve decision-making for each and all

With the DIBELS Data System, student performance results become powerful reports at the individual, class, school, and district level so you can make timely decisions and improve student outcomes. Designed by leading experts in educational research, the DIBELS Data System supports validated assessments, is web-based, and easy to use! Your account will bridge the gap from research to practice and bring the most scientifically validated methods and strategies to you.

- Operated by the Center on Teaching and Learning in the College of Education at the University of Oregon
- Provides research-based reading measures in English and Spanish (DIBELS and IDEL)
- Offers reliable, easy-to-use, and secure Data System service since 2001
- Currently used in more than 15,000 schools
- Costs only $1 per student per year
- All proceeds reinvested in education and research
