ABSTRACT

This report evaluates the stability of the DIBELS 8th Edition (DIBELS 8) Composite score percentile ranks from the 2024-25 school year, relative to those from the 2021-22 school year. We visually compared the distributions of scores on the DIBELS 8 Composite for three cross-sectional samples: the 2021-22 national norming sample (i.e., students from whom the current operational percentile ranks were calculated), the 2024-25 national sample (i.e., students with DIBELS 8 data in 2024-25 school year), and the 2024-25 English learner (EL) subsample (i.e., a subsample of students identified by their school as ELs in 2024-25). Across measures and timepoints in Grades K-3, the distributions and median scores in 2024-25 are marginally higher than those in 2021-22, whereas the distributions and median scores are similar between 2021-22 and 2024-25 for Grades 4 and above. In the sample of EL students, scores distributions are uniformly lower when compared with national samples from prior years. These results provide a rationale for updating the percentile ranks in the mCLASS and DIBELS data systems to align with current performance trends. We also provide a series of look-up tables by measures and grades for the EL sample.

DIBELS 8th EDITION COMPOSITE SCORE PERCENTILE RANKS: COMPARING TRENDS IN THE 2021-22 AND 2024-25 SCHOOL YEARS ACROSS FULL AND ENGLISH-LANGUAGE LEARNER SAMPLES

In this report, we assess the stability of the percentile ranks for DIBELS 8th Edition (DIBELS 8; [University of Oregon, 2018](#)) by comparing the raw scores distribution from the 2024-25 school year with those from the 2021-22 school year ([University of Oregon, 2022](#)). Our aims are twofold. First, the operational percentile ranks in the mCLASS and DIBELS Data System are three years old, having been derived from the 2021-22 national sample, and collected when most schools transitioned back to in-person instruction after an extended period of school closure due to the COVID19 pandemic ([National Center for Education Statistics, 2021](#)). Given the evidence on the initial set-back and slow recovery in academic achievement ([Betthäuser et al., 2023](#); [Furjanic et al., 2024](#); [Lewis & Kuhfeld, 2025](#)) as well as persistent changes in student composition ([Francis & Goodman, 2025](#)), we hypothesize that the 2024-25 scores will differ from the older norms. Second, we aim to determine whether the 2024-25 distribution varies between two student groups: the full national sample and the subset identified by schools as English learners (ELs). This work replicates the methodology of last year's report, which compared 2023-24 national sample data to the 2021-22 baseline ([Kennedy, 2025](#)).

To accomplish these goals, we visually summarized and compared the distributions of scores on the DIBELS 8 Composite for three samples of students: the 2021-22 national norming sample (i.e., the sample from which the current operational percentiles were calculated), the 2024-25 national sample (i.e., all students with DIBELS 8 data in 2024-25), and the 2024-25 EL sample (i.e., students identified by their school as ELs in 2024-25). As detailed below, across measures and timepoints in grades K-3, distributions and median scores in 2024-25 are marginally higher than those in 2021-22, whereas the distributions

and median scores are similar between 2021-22 and 2024-25 for grades 4 and above. The sub-group analysis revealed that the distributions of scores for the EL sample are uniformly lower. We follow our comparisons with a rationale for updating the percentile ranks and provide a series of lookup tables by measure for the EL sample.

METHOD

PARTICIPANTS

Data for the 2021-22 percentile ranks were collected throughout the 2021-22 school year. Across kindergarten through Grade 8, the sample includes 2,869,947 students from all 50 states and two online databases: the DIBELS Data System (<https://dibels.amplify.com/>) and mCLASS with DIBELS 8th Edition (<https://amplify.com/programs/mclass/>). Data for the 2024-25 percentiles were collected throughout the 2024-25 school year from the same grade levels and data systems. Across grades, the sample includes 4,863,144 students from all 50 states. [Table 1](#) provides an overview of the two samples, including the number of students by grade and time of assessment. [Table 1](#) also reports the percentage change in sample size from 2021-22 to 2024-25. For example, the Grade 2 sample at beginning of year in 2024-25 was 80.3% larger than the Grade 2 sample at beginning of year in 2021-22.

The EL sample represents a subset of the full 2024-25 data set and consists of all students who (a) were tested using mCLASS, and (b) were identified in the mCLASS system by their school as being an EL in 2024-25. Across grades, the subsample includes 331,106 students. Identification of EL status is an optional feature in the mCLASS system only, meaning that the EL sample only includes students whose school used mCLASS and likely does not represent all students who received EL services. Despite these limitations, we feel this comparison provides important context to schools about the performance of their EL students.

Table 1.**Overview of the 2021-22 and 2024-25 DIBELS 8 Percentile Rank Samples by Grade**

Grade	Time of Year	Students			
		2021-22	2024-25	% Change	EL 24-25
K	BOY	549,107	854,581	55.63	58,068
	MOY	549,602	868,051	57.94	61,370
	EOY	548,647	870,257	58.62	64,172
1	BOY	541,393	893,690	65.07	63,841

	MOY	9,969	18,151	82.07	
	EOY	10,840	18,821	73.63	
8	BOY	9,959	20,467	105.51	
	MOY	9,475	17,491	84.60	
	EOY	10,031	17,696	76.41	
#Student-Timepoint		7,069,220	12,893,888		870,484

Note. Note. BOY = Beginning of year; MOY = Middle of year; EOY = End of year; % Change = Percentage change in sample size for the 2024-25 national sample compared to the 2021-22 national sample; EL = English learner (students identified by their school as ELs in 2024-25).

MEASURES

DIBELS 8th Edition (DIBELS 8)

DIBELS 8 ([University of Oregon, 2018](#)) is a series of standardized, timed assessments administered in kindergarten through Grade 8. DIBELS is designed to be administered three times per year, at the beginning, middle, and end of the school year. Each subtest, described below, results in a fluency score that represents the number of units identified correctly in the allotted time. Scores on the individual subtests are then combined to form the DIBELS Composite score, an overall indicator of early reading ability. The Composite is based on performance across two to five subtests, depending on grade. In each grade, scores from all administered subtests are weighted based on the results of a confirmatory factor analysis, accounting for relations among subtests ([University of Oregon, 2018](#)). For any subtest not administered due to standard discontinuation procedures, a zero is imputed.

Letter Naming Fluency is an individually administered measure in which students in kindergarten and Grade 1 are presented with a page of upper- and lower-case letters arranged in random order and are asked to name as many letters as they can in one minute.

Phonemic Segmentation Fluency is an individually administered, one-minute test of a student's ability to segment two- to six-phoneme words into their individual phonemes fluently. To administer *Phonemic Segmentation Fluency*, an examiner orally presents a series of words and asks students kindergarten and Grade 1 to verbally identify the individual phonemes in each word. Forms start with two phonemes, increasing in length to three phonemes in kindergarten and six phonemes in Grade 1.

Nonsense Word Fluency is an individually administered measure of decoding that uses phonetically regular letter combinations that do not form real English words. For example, *tup* is phonetically regular and therefore decodable but is not a real word. The

fluency with which students read these invented words measures how facile they are with knowledge of letter sounds and letter sound blending. Students in kindergarten through Grade 3 are asked to read a series of nonsense words for one minute, resulting in two scores: the number of Correct Letter Sounds, and the number of Words Recoded Correctly (i.e., words blended correctly) per minute.

Word Reading Fluency is an individually administered test of word reading. Students in kindergarten through Grade 3 read as many individual words aloud from a tabular word list as they can in one minute. Probes include both sight words (e.g., the, is, school) and regular phonetic words in increasing difficulty within forms and across grades. The resulting score is the number of Words Read Correctly per minute.

Oral Reading Fluency is an individually administered test of accuracy and fluency with connected text. The passages are calibrated for the goal level of reading for each grade level. Students in Grades 1 – 8 read a passage aloud for one minute. Words omitted, substituted, and hesitations of more than three seconds are scored as errors. The resulting score, totaling the words read correctly and words self-corrected within three seconds, is the number of Words Read Correctly per minute. The ratio of Words Read Correctly to the total number of words attempted gives the *Oral Reading Fluency Accuracy* score.

Maze is a group administered measure of comprehension. Students in Grades 2 – 8 are presented with a passage in which every seventh word (except in the first and last sentence) is removed and replaced with three alternatives: one that is the original word; a near, semantically coherent distractor; and a far distractor. The final score is the one-half the number of overt errors subtracted from the number of missing words selected correctly within three minutes.

PROCEDURES

All available DIBELS Composite scores were exported from the DIBELS Data System and mCLASS databases in June 2025. The full distribution of scores was then visualized separately for each sample using beeswarm plots, a version of dot plots ([Wilkinson, 1999](#)) that arranges the individual data points to minimize overlap. The aim of a beeswarm plot is to display the distribution and density of data more clearly. Data points are arranged compactly along a single axis, with points shifted minimally to avoid overlapping, which ensures the visibility of all points, thus emphasizing the density and variation. Plots were generated in the R statistical computing environment, version 4.4.0 (R Core Team, 2024) using the ggbeeswarm package ([Clarke et al., 2023](#)), an extension to the ggplot2 package ([Wickham, 2016](#)).

Wider areas of the plot represent scores achieved by more students. Plots are paneled by time of year (i.e., the beginning [BOY], middle [MOY], and end [EOY] of year) and grade level. The median score is represented by a solid gray line, the value of which is printed in the middle of each beeswarm. The 25th and 75th percentiles are represented by dashed gray lines. Points are color coded corresponding to the level of risk associated with the score, based on a previous analysis of the screening accuracy of the DIBELS Composite. Details regarding that analysis are presented in the DIBELS 8 Technical Manual ([University of Oregon, 2018](#)).

Screening accuracy was evaluated using Receiver Operating Characteristic Curve analyses ([Habibzadeh et al., 2016](#)). Points colored red, the *well below benchmark* range, fall below the threshold for predicting to performance at the 20th percentile on the Iowa Assessment ([Welch & Dunbar, 2012](#)) with a specificity of at least .80. Points colored yellow, the *below benchmark* range, fall below the threshold for predicting to performance at the 40th percentile on the Iowa Assessment with a specificity of at least .80. Points colored green, the *benchmark* range, fall above the threshold for predicting to performance at

the 40th percentile on the Iowa Assessment with a specificity of at least .80, but below the threshold for predicting to the 40th percentile with a specificity of .90. Points colored blue, the above benchmark range, fall above the threshold for predicting to performance at the 40th percentile on the Iowa Assessment with a specificity of at least .90.

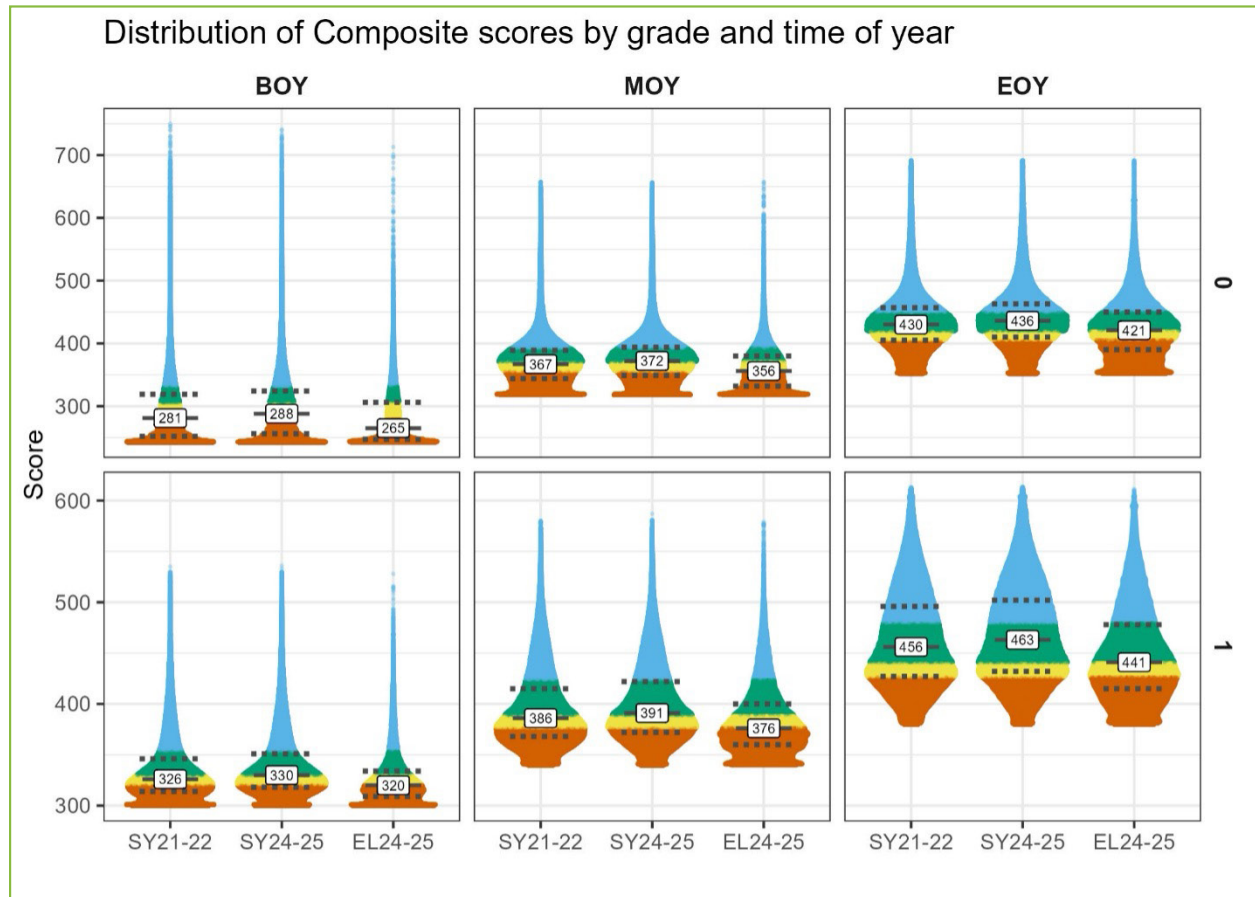

RESULTS

Beeswarm plots of the DIBELS Composite by grade and time of year are presented in [Figures 1 – 4](#). As is evident in the figures, the distribution and median scores in 2024-25 national samples are marginally different from the 2021-22 national samples. Across grades K-3, at all time-points, the median score in 2024-25 is between 3 to 7 points higher. For example, at the beginning of Grade 2, the median DIBELS Composite score for the 2021-22 normative sample is 326, whereas for the 2024-25 normative sample, the median score is 332. Whereas the score in 2021-22 was just below the threshold between *below benchmark* and *at benchmark*, the score in 2024-25 is just above the *at benchmark* threshold. Moreover, in the 2024-25 sample, the distribution in the *well below benchmark*, *below benchmark*, and *at benchmark* ranges appears narrower than the range of scores in 2021-22 sample, as indicated by the width of the beeswarm plot, suggesting that the number of students scoring in different benchmark zones differ.

Both plots also have small bumps at the base of the shape, which represents a soft floor effect, and larger bumps at the bottom of the above benchmark range, an artifact of the DIBELS 8 gating rules ([University of Oregon, 2018](#)), in which scores for some component measures are imputed for students who score highly on ORF and Maze. Similarly, at the end of Grade 2, the median DIBELS Composite score for the 2021-22 normative sample is 448 whereas for the 2023-24 normative sample, the median score is 453, and again, the shape of 2024-25

Figure 1.

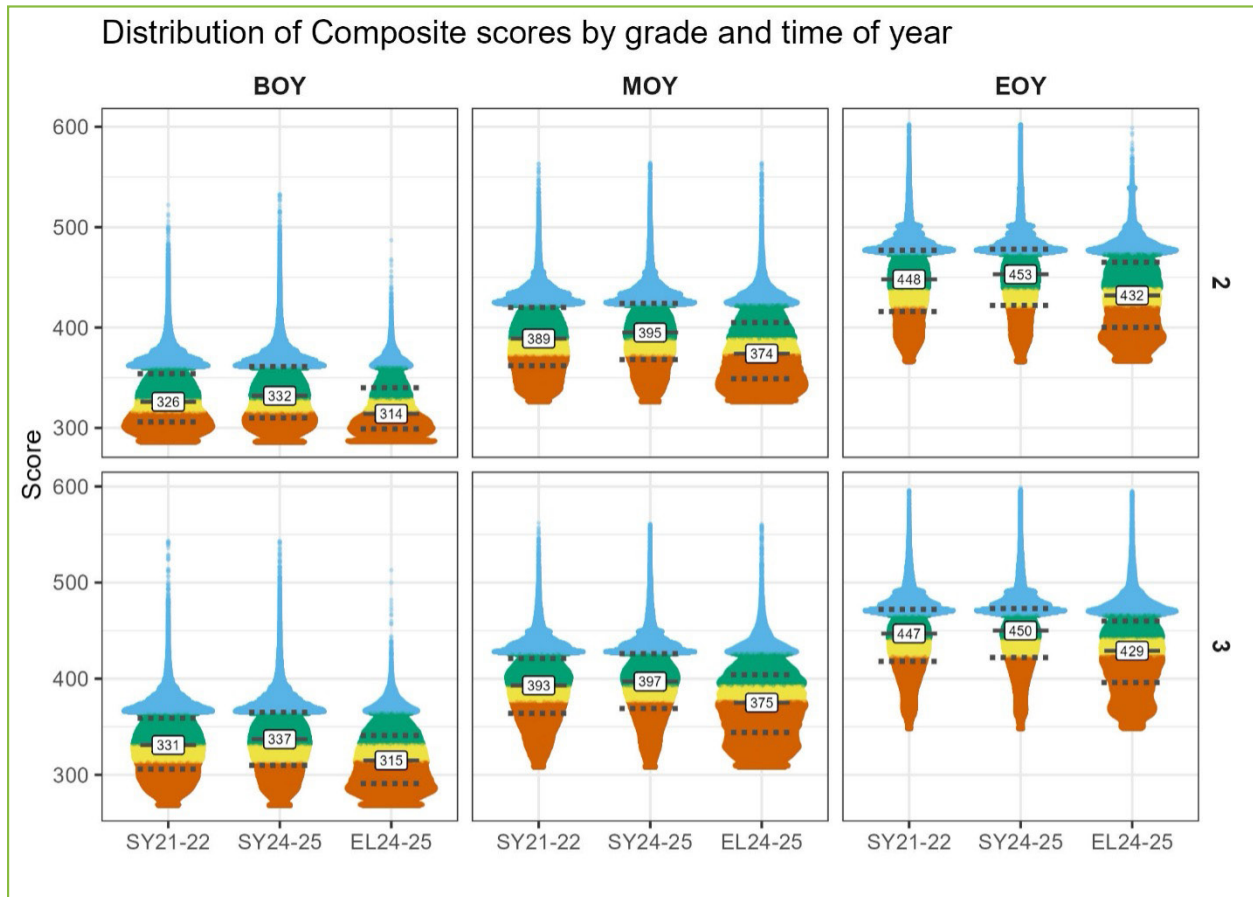

Distributions of DIBELS 8 Composite Scores in Kindergarten and Grade 1 by Time of Year and Sample

Note. BOY = Beginning of year, MOY = Middle of year, EOY = End of year, 0 = Kindergarten, 1 = Grade 1, SY21-22 = School year 2021-22 national sample, SY24-25 = School year 2024-25 national sample, EL24-25 = English learner 2024-25 sample. The median score is represented by a solid gray line, the value of which is printed in the middle of each beeswarm. The 25th and 75th percentiles are represented by dashed gray lines. Points are color coded corresponding to the level of risk associated with the score, based on a previous analysis of the screening accuracy of the DIBELS Composite ([University of Oregon, 2018](#)).

Figure 2.

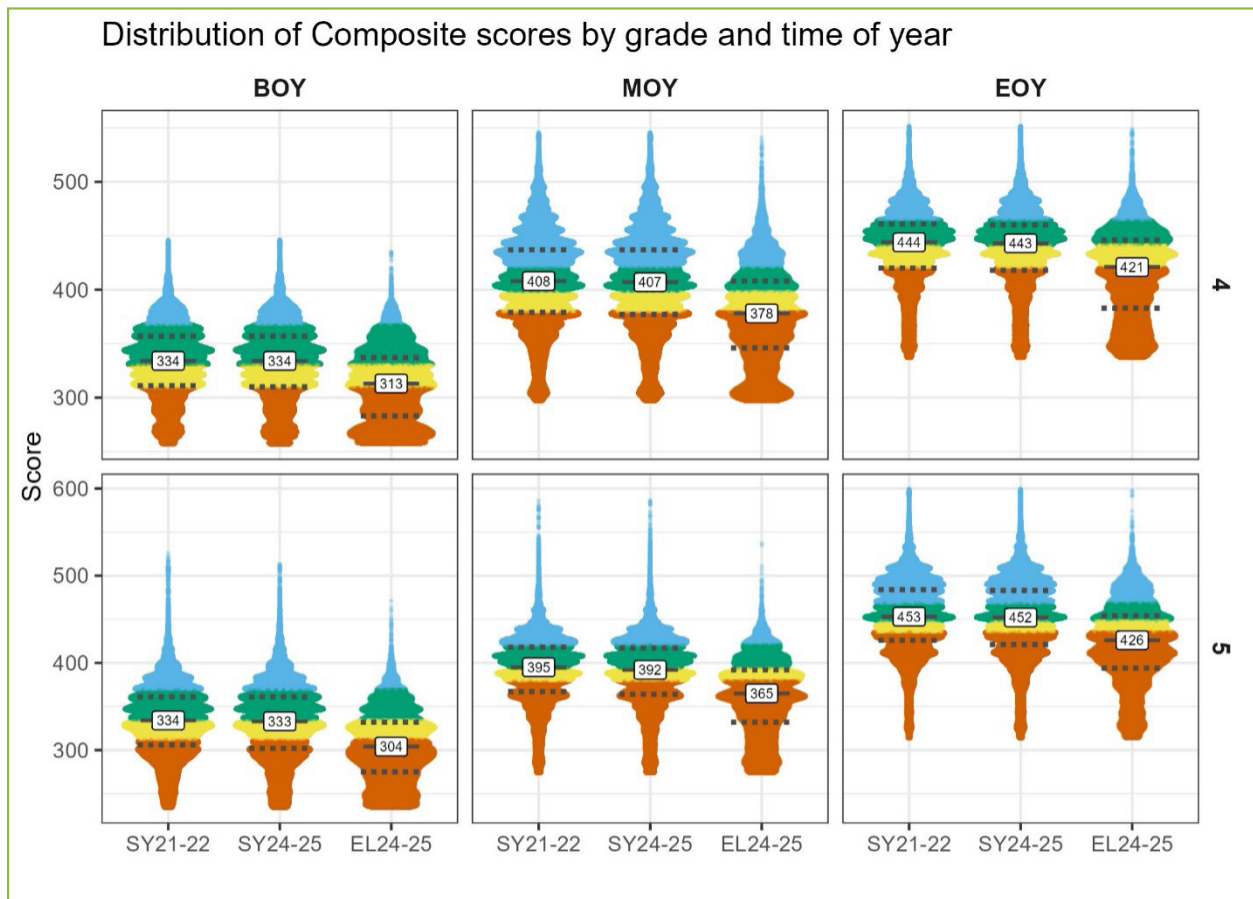

Distributions of DIBELS 8 Composite Scores in Grades 2-3 by Time of Year and Sample

Note. BOY = Beginning of year, MOY = Middle of year, EOY = End of year, 2 = Grade 2, 3 = Grade 3, SY21-22 = School year 2021-22 national sample, SY24-25 = School year 2024-25 national sample, EL24-25 = English learner 2024-25 sample. The median score is represented by a solid gray line, the value of which is printed in the middle of each beeswarm. The 25th and 75th percentiles are represented by dashed gray lines. Points are color coded corresponding to the level of risk associated with the score, based on a previous analysis of the screening accuracy of the DIBELS Composite ([University of Oregon, 2018](#)).

Figure 3.

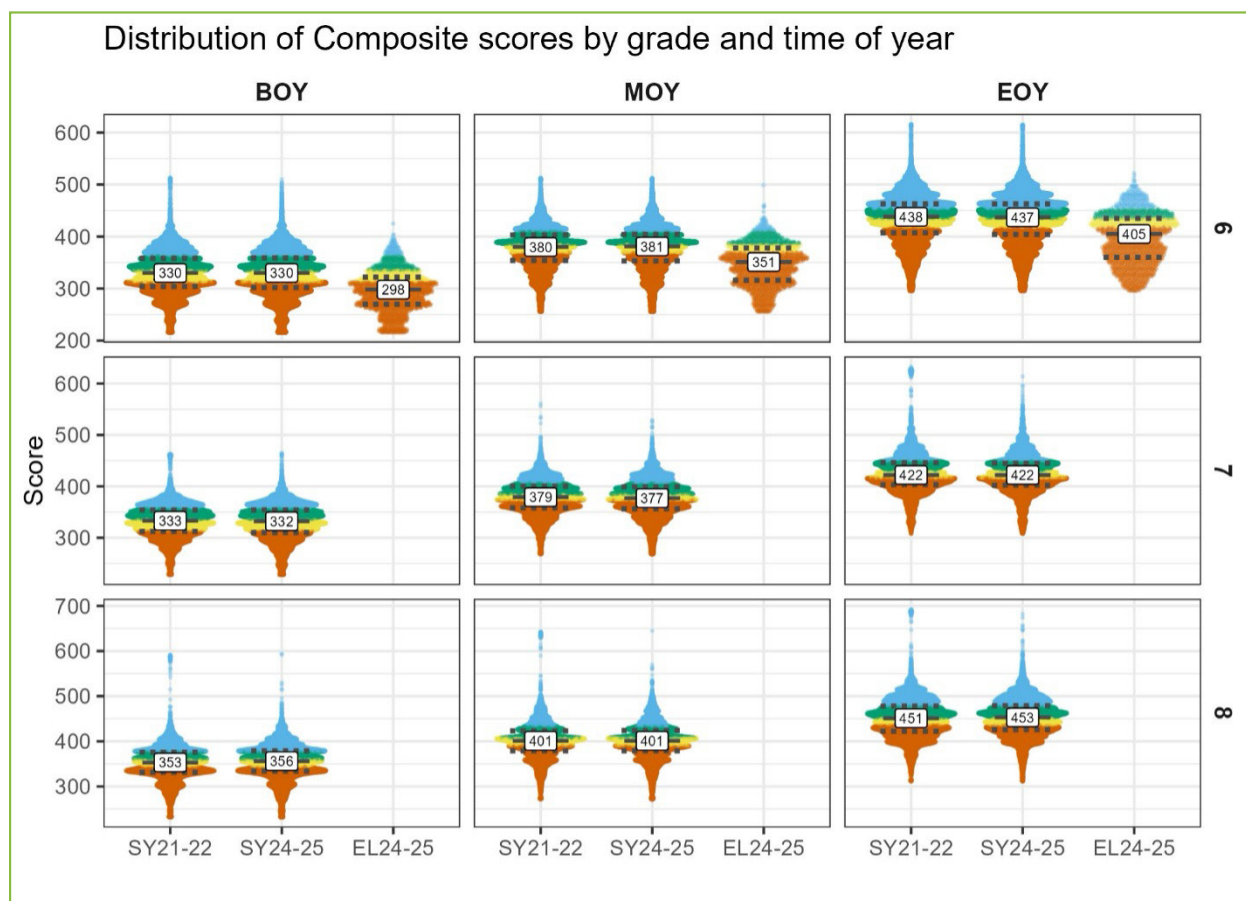

Distributions of DIBELS 8 Composite Scores in Grades 4-5 by Time of Year and Sample

Note. BOY = Beginning of year, MOY = Middle of year, EOY = End of year, 4 = Grade 4, 5 = Grade 5, SY21-22 = School year 2021-22 national sample, SY24-25 = School year 2024-25 national sample, EL24-25 = English learner 2024-25 sample. The median score is represented by a solid gray line, the value of which is printed in the middle of each beeswarm. The 25th and 75th percentiles are represented by dashed gray lines. Points are color coded corresponding to the level of risk associated with the score, based on a previous analysis of the screening accuracy of the DIBELS Composite ([University of Oregon, 2018](#)).

Figure 4.

Distributions of DIBELS 8 Composite Scores in Grades 6-8 by Time of Year and Sample

Note. BOY = Beginning of year, MOY = Middle of year, EOY = End of year, 6 = Grade 6, 7 = Grade 7, 8 = Grade 8. SY21-22 = School year 2021-22 national sample, SY24-25 = School year 2024-25 national sample, EL24-25 = English learner 2024-25 sample. The median score is represented by a solid gray line, the value of which is printed in the middle of each beeswarm. The 25th and 75th percentiles are represented by dashed gray lines. Points are color coded corresponding to the level of risk associated with the score, based on a previous analysis of the screening accuracy of the DIBELS Composite ([University of Oregon, 2018](#)).

distribution looks narrower in comparison. In this case, there is no discernable floor effect, and fewer students scored *below benchmark*. The larger bumps at the bottom of the above benchmark range created by the imputed scores are still evident. Across Grades 4 through 8 and all three timepoints, the median scores are similar between the two years. For instance, at the beginning of Grade 5, the median DIBELS Composite score for the 2021-22 normative sample is 334, versus to 333 for the 2024-25 normative sample,

and the end of year scores between the two samples are 453 and 452 respectively. The distribution of scores also looks similar, suggesting that about the same proportion of students scored comparably across the range of scores in each year.

In contrast, distributions for the EL sample are uniformly lower than in either national sample. Using Grade 2 to again illustrate the patterns observed across grades, the median BOY score for the EL sample is 314, much lower than the median for either national sample, and on the threshold between the *below benchmark* and *well below benchmark*. Notably, the entire distribution is shifted downward, with a much higher proportion of scores in the *well below benchmark* range, and a much more pronounced floor effect. The same pattern is also evident at EOY, with a median score almost 21 points below that of 2024-25 national sample, a much higher proportion of scores in the *well below benchmark* range, and a much more pronounced floor effect. Similar patterns are seen in other grades.

DISCUSSION

These results suggest that the distributions of the 2021-22 and 2024-25 DIBELS 8 normative samples are marginally different, especially in Grades K-3. Collectively, these empirical results, along with the evolving instructional context, provide a rationale for updating the DIBELS 8 national percentile ranks to better align with current performance levels. Importantly, these results also clearly show that the normative performance of the EL sample is substantially lower than that of the full national sample, supporting the use of separate percentile ranks for students identified as ELs.

Thus, to support DIBELS 8 users in providing context for the performance of, and help guide instructional decisions for multilingual learners, we provide in [Appendices A – I](#) a series of lookup tables by measure for the EL sample. Complete descriptions of and additional information regarding each subtest is available in the DIBELS 8 Technical Manual ([University of Oregon, 2018](#)). For each subtest, tables include columns representing

each of the three benchmark periods: beginning, middle, and end of year. Benchmark periods are denoted in decimal form, such that 0.BOY represents the beginning of kindergarten, 0.MOY represents the middle of kindergarten, and 0.EOY represents the end of kindergarten. The inclusion of a grade indicator alongside the benchmark period eases reading the tables, which each extend over many pages. Similarly, the raw score is repeated on both the left and right side of each table, to facilitate locating the desired percentile rank. Additional information about interpreting percentiles is available in the DIBELS 8th Edition 2024-25 Benchmark Percentile Ranks ([University of Oregon, 2026](#)).

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.

Note. Grade and benchmark period are reported in column headers as “Grade.Period” where BOY = beginning of year, MOY = middle of year, and EOY= end of year. LNF = Letter Naming Fluency; PSF = Phonemic Segmentation Fluency; NWF-CLS = Nonsense Word Fluency – Correct Letter Sounds; NWF-WRC= Nonsense Word Fluency – Words Recoded Correctly; WRF = Word Reading Fluency.
